Deciphering Service Provider Names

- Provider names (individual and organization) for medical services are captured in MC030 and are related to the Service Provider NPI in MC026
- Sometimes the service provider name information does not seem logical, complete or correct
- Data users can utilize this methodology to help determine the validity of the service provider data

Deciphering Service Provider Names

- To obtain additional organization information related to the service NPI that is not included in the medical claims record, reference the [NPPES NPI](#) data on the CMS website
- Download as many of the tables as you wish but specifically include the table called *Other Name Reference File* (this file name may vary slightly)
- Select the record(s) with the matching NPI(s) to profile other related organization names

Deciphering Service Provider Names

- The examples below are for ambulance services.

- ACHI has created a statewide and county populations distribution table that provides estimated rates of coverage based on the APCD and other external data sources

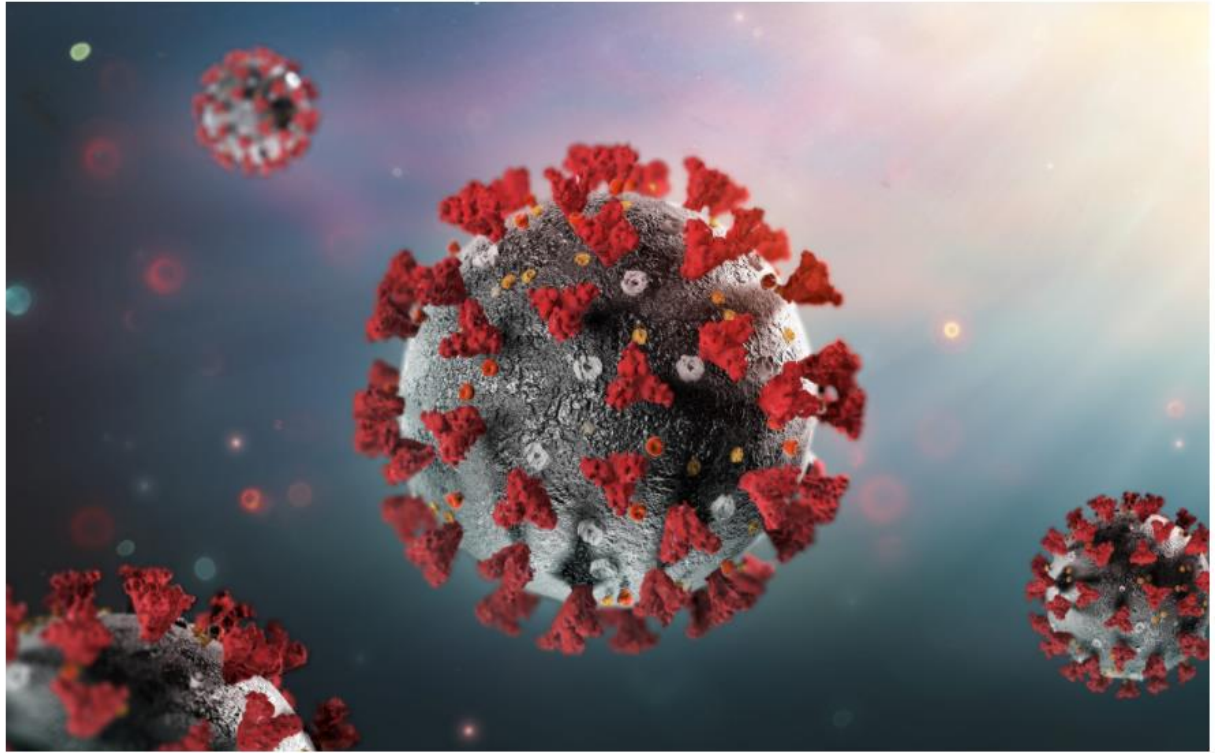

Statewide Types of Coverage

- Medicare Advantage
- Medicare
